# Growth Servicing Plan

2025 - 2030

# Acknowledgement of Country

Sydney Water respectfully acknowledges Aboriginal people as the traditional custodians of Sydney, Illawarra and the Blue Mountains where we work, live and learn. We pay our respects to Elders, past and present. We acknowledge their deep connections to land and waters. In the spirit of reconciliation, we remain committed to working in partnership with local Traditional Owners to ensure their ongoing contribution to the future of the water management landscape, learning from traditional and contemporary approaches, while maintaining and respecting their cultural and spiritual connections.

*Aboriginal rock art, Woronora*

# A message from Paul Plowman

Sydney Water is leading with purpose as we respond to the challenges of a growing city. Our long-term plans are designed to enable thriving, liveable and sustainable communities.

We're focused on renewing and expanding our infrastructure to meet the needs of both new and existing customers. This includes aligning with key government initiatives, such as Transport Oriented Development (TOD) program, low to mid-rise policy changes, and National Housing Accord targets and planning reforms to unlock housing supply and support economic growth.

We are also preparing for new and emerging water users, including a forecast rise in data centres, which will require tailored servicing strategies.

We recognise the uncertainty in today's economic and environmental landscape.

That's why we're committed to both prudent investment and close collaboration with the development industry to ensure infrastructure is delivered where and when it is needed.

The reintroduction of infrastructure contributions and Sydney Water's 2025–30 price determination are key to meeting future demand. We will prioritise projects to ensure safe, reliable services, maintain high-quality drinking water and wastewater systems, upgrade ageing infrastructure and enable new housing across Greater Sydney.

To support this, we've made organisational changes to improve agility and responsiveness. These changes are helping us build a more resilient and customer-focused organisation, ready to serve a city expected to reach eight million people by 2056.

Our updated Growth Servicing Plan 2025–2030 reflects our collaboration with local government and developers to identify and service priority growth areas.

As we plan for the next five years and beyond, we remain committed to keeping customers and stakeholders informed and engaged

We thank our development customers and industry partners for your continued collaboration. Together, we are shaping a sustainable future for Greater Sydney, the Blue Mountains and the Illawarra.

A handwritten signature in black ink, appearing to read 'P. Plowman', with a long horizontal stroke extending to the right.

Paul Plowman

**Sydney Water**

# A message from Charlotte Alexander

Sydney Water's Growth and Development team is evolving to meet the needs of a rapidly growing city and a dynamic development landscape.

Over the past year, we've made strong progress on several fronts, with a clear focus on improving our customer experience and enabling sustainable growth.

Our Section 73 improvement initiative is well underway, with a shared commitment between Sydney Water and the NSW Government to reach a 100-day turnaround target. While we're not there yet, we're making steady progress and remain confident in achieving this goal.

These improvements will help streamline the development approval process, speeding up connections for customers.

The Developer Transformation Program to replace the e-developer platform has advanced

significantly, and is on track to be rolled out in 2026. The new platform will be easier to navigate and more intuitive for users seeking approvals and information. We are working closely with our change champions across the Water Servicing Coordinator network for a smooth roll-out of the new platform.

We've realigned the team to better address our customer needs, including:

- Supporting faster application turnaround times through process optimisation.
- A dedicated team for early engagement, ensuring developers receive timely advice and support during the planning phase.
- A dedicated team for out of scope Building Plan Approvals.

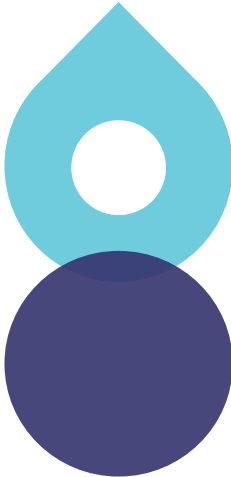

We continue to work closely across all agencies to identify capacity and service opportunities.

Over the last 12 months we have actively supported the TOD program and accelerated re-zoning prospects.

As we continue to refine our processes and systems, we remain committed to working collaboratively with industry and government to unlock housing supply and deliver infrastructure that supports thriving, liveable, and sustainable communities.

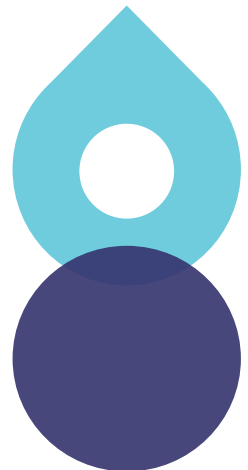

If you'd like to discuss how your development fits into the Growth Servicing Plan or explore acceleration opportunities, please reach out to us at [developerservices@sydneywater.com.au](mailto:developerservices@sydneywater.com.au)

Charlotte Alexander  
**Head of Growth & Development**

# Planning for the long-term future

Our Growth Servicing Plan shows the expected availability of trunk water-related infrastructure over the next 5–15 years across major greenfield and infill areas.

We will update the plan each year with new insights and potential timing of our new infrastructure.

Our long-term planning supports the NSW Government's vision for thriving, liveable and sustainable communities across Sydney, Blue Mountains and the Illawarra regions.

By 2056, we will be providing water services to about eight million customers. We see our role going beyond our current high-quality water and wastewater services, with water playing a lead role in cooling and greening the city. This will be particularly important in western suburbs of Sydney where temperatures are regularly 6-10 °C higher than the coastal parts of the city.

This gives us an opportunity to think differently about how we manage our precious water resources in an urban environment – including water re-use, increased recycling and integrated water management opportunities for parks and recreation.

# Transport Oriented Development

In 2023, the Department of Planning, Housing and Infrastructure launched the Transport Oriented Development (TOD) Program. Within the next 15-20 years, the TOD program is expected to deliver more than 170,000 new homes in NSW, in walking distance of train and metro stations. This key initiative supports the NSW Government's commitment under the National Housing Accord to deliver 377,000 new homes by 2029.

The program is to be delivered in two parts:

- Tier 1 – Accelerated Rezoning that applies to sites within a 1,200 metre radius of eight priority stations: Kellyville, Bella Vista, Hornsby, Macquarie Park, Crows Nest, Bays West, Homebush, and Bankstown.
- Tier 2 – Applies to sites within a 400 metre radius of 37 train and metro stations, 24 of which fall within Sydney Water's area of operations.

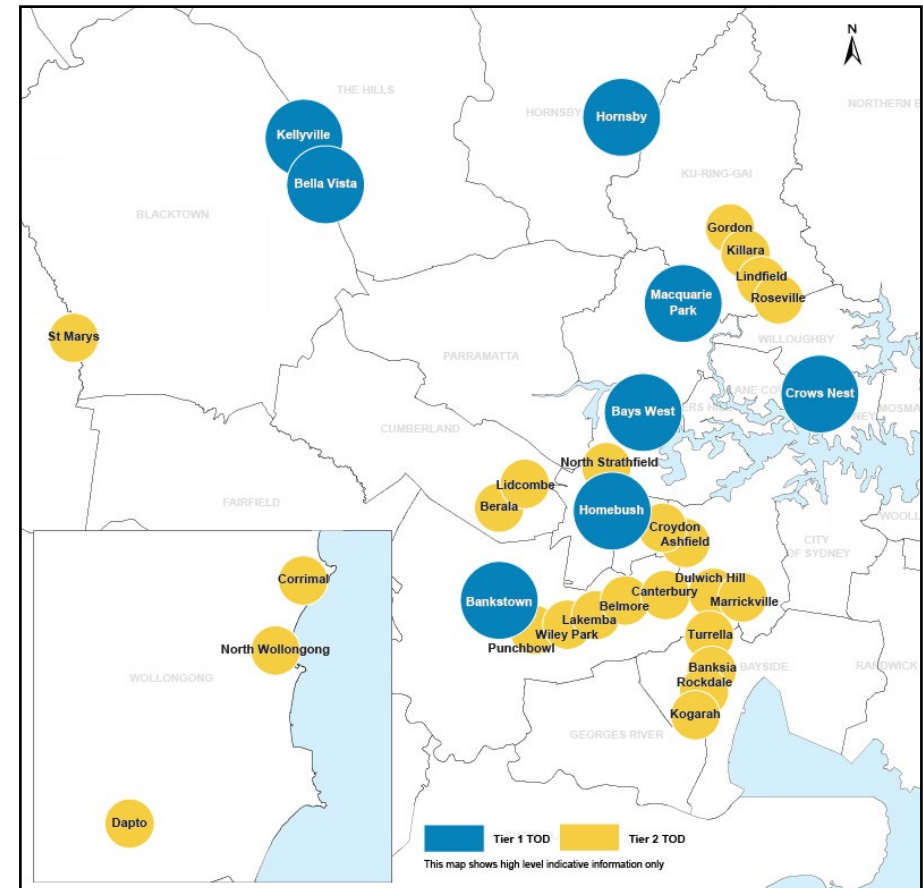

Sydney Water recognises the importance of aligning housing growth with the timely provision of essential infrastructure. We are committed to supporting the TOD initiatives in a prudent and efficient manner, ensuring our current and future customers have access to safe, reliable, and sustainable water services.

For the Tier 1 TODs (with The Bays West subject to rezoning) services will be enabled within the Housing Accord period. Due to the proposed volume of growth at these sites further planning studies and asset delivery will likely be required.

## Why feasibility applications matter

Feasibility applications from the development industry are crucial to understand when and where growth may occur—and at what rate. These applications allow us to; move from forecasts to demonstrated demand, assess the use of existing assets for initial stages and enable us to prioritise asset upgrades and infrastructure delivery when identified early.

We encourage developers to engage with us early on any developments

within a TOD site and to submit growth yield and staging information with their feasibility applications. This helps us capture development interest more accurately and plan our servicing strategies with greater precision and responsiveness. For more information on how to lodge a feasibility application see [Steps for first-time developers](#).

# Servicing new growth areas

Sydney Water can deliver new infrastructure for growth areas or the process can be accelerated by a developer through a commercial agreement.

## Infrastructure delivered by Sydney Water

### How we plan our services

We align the delivery of our trunk services with the NSW Government's land release program. Our main guide is the Department of Planning, Housing and Infrastructure (DPHI) lot and dwelling projection forecast but we also consider:

- NSW Government benchmarks for zoned and serviced land
- sub-regional analysis of greenfield areas
- development application activity and dwelling completions
- comparison of annual completion rates to the corresponding dwelling production forecasts
- the capacity of existing infrastructure in infill areas
- the level of land fragmentation in greenfield areas
- intelligence from industry stakeholders
- macro-economic trends.

### How we make investment decisions

As a state-owned corporation, our investment decisions must comply with requirements set by our pricing regulator (IPART) who also regulate the reintroduction of infrastructure contributions outlined on page 11.

We must show that these decisions are financially prudent, so the timing of our

infrastructure investments is critical. Any new infrastructure we fund must be substantiated by demonstrated development demand with high certainty of delivery and timing.

### How we decide when to build infrastructure

If we can demonstrate development demand to IPART, we will identify the most viable way to service new development by adjusting, amplifying or extending our trunk network, or building a decentralised system.

Building infrastructure is expensive so the timing of construction is important. Developments must be ready to connect to our infrastructure soon after construction for it to be an efficient and economical investment.

decision to progress planned infrastructure to delivery:

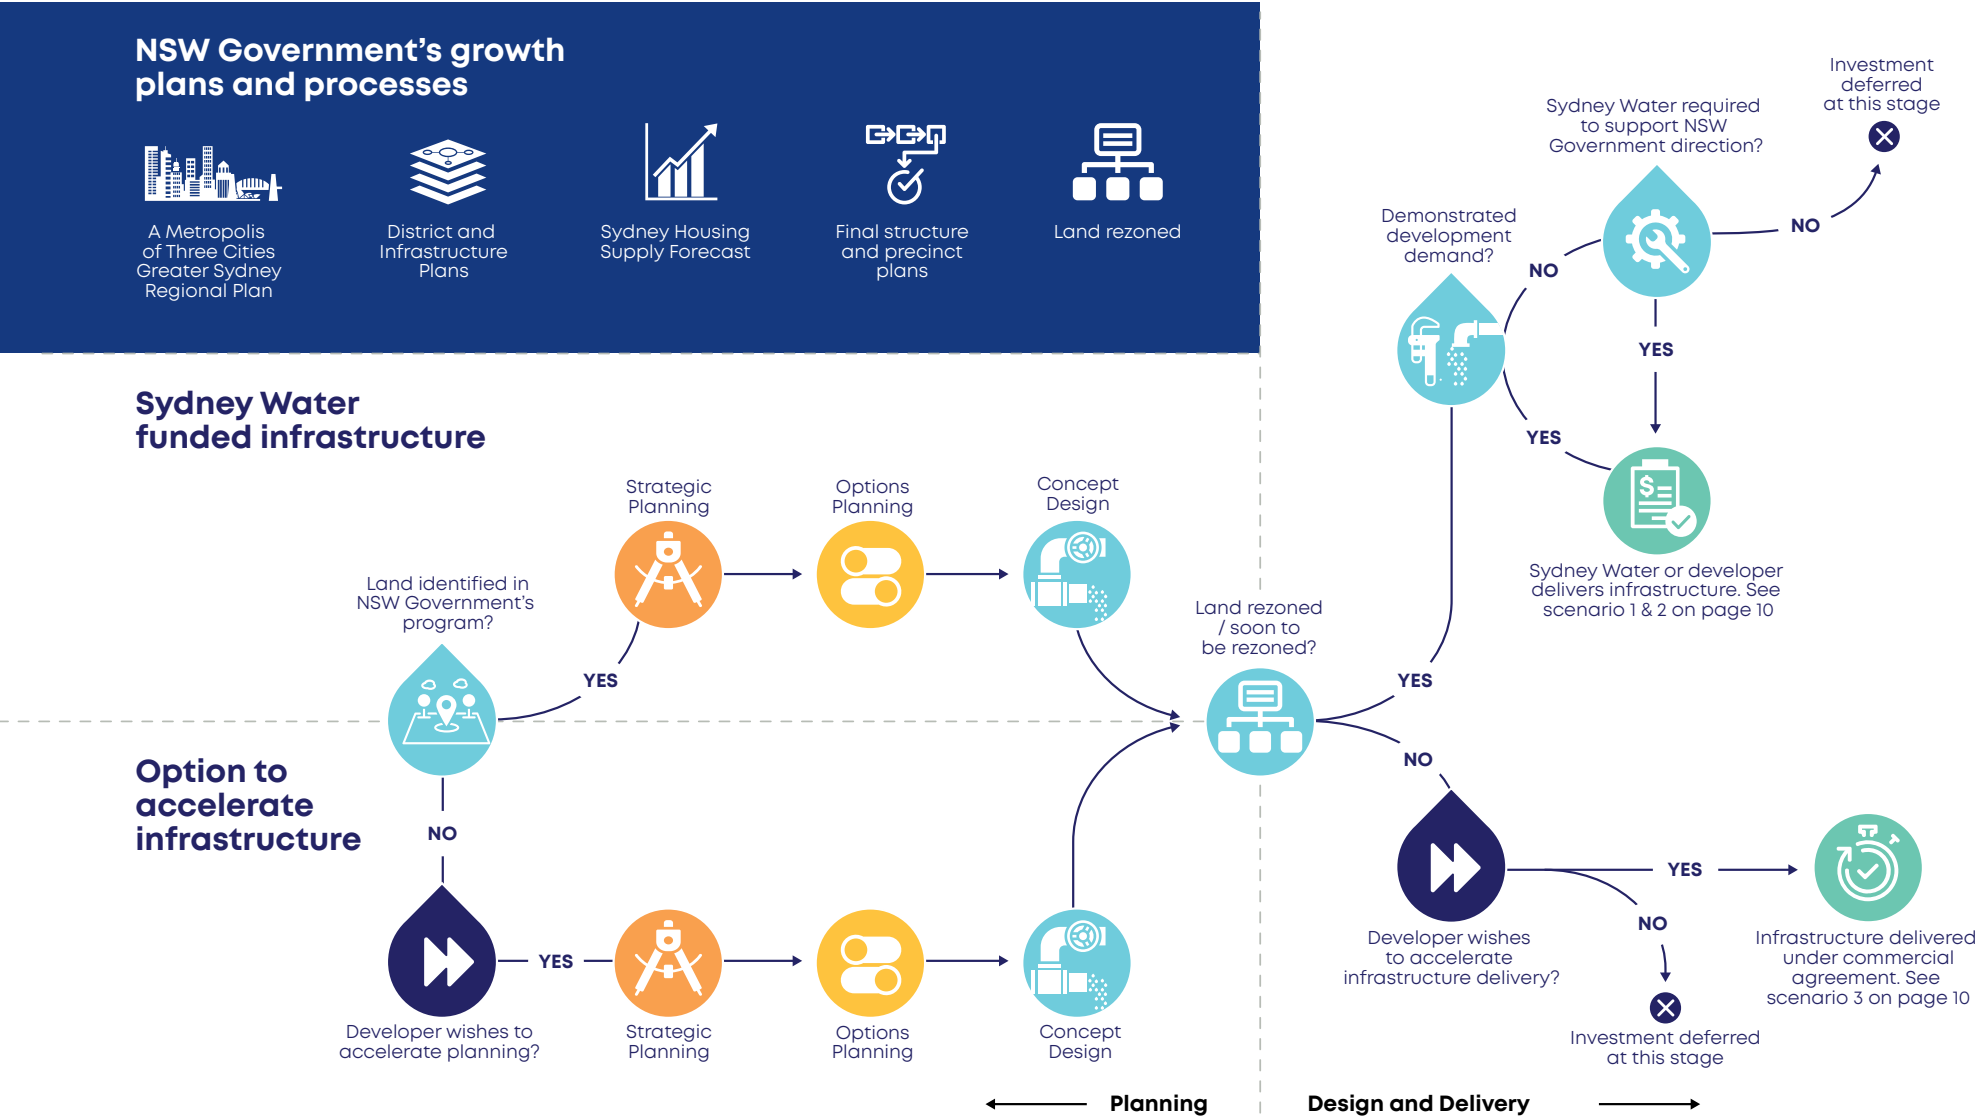

- Is there consolidated ownership of the land and do the owners wish to develop?
- Is the land fragmented? Do the owners wish to develop and is there already developed land adjacent?
- Is it an infill development site and is there a need for additional system capacity?
- Is there a government direction? For example, a land use plan or commitment to service the area.

Our current planning and delivery timeframes are presented in the maps on pages 17 to 28 of this Plan.

# Pathways for servicing new growth areas

There are multiple pathways for servicing new growth areas. This diagram provides an overview of how our planning and delivery aligns with the NSW Government’s land release program along with the options for developers to accelerate infrastructure.

## Accelerating development

A developer or landowner can apply to the NSW Government to expedite the release of precincts in growth areas ahead of schedule.

Once the government approves the application, we may establish a commercial agreement outlining the responsibilities of both the developer and Sydney Water. This agreement covers the extent of planning and delivery required outside the immediate development area to achieve the best, integrated regional servicing solution. It also includes commercial arrangements for planning and delivery, which initially falls under the developer's responsibility for the entire accelerated area.

**We recommend you speak to us as early as possible if you're thinking about bringing infrastructure delivery forward for a proposed development. It takes time to plan and build water infrastructure and early engagement ensures we have the opportunity to work collaboratively to achieve the best servicing solution.**

## Working together to deliver the right services at the right time

Recognising that development investment decisions can have other drivers, developers have the option to independently forward fund and accelerate the planning and construction of infrastructure. This is generally separate to the requirements to pay infrastructure contributions. This can be a good option for proposed developments if they are:

- ahead of any of our current planning timeframes
- on land where we have high-level direction but no immediate plans to deliver infrastructure.

Information about our planning stages and options for developers to fund and accelerate infrastructure delivery is on page 10.

The first step in bringing infrastructure forward is establishing a commercial agreement. This outlines the requirements and responsibilities of the developer and Sydney Water, including financing arrangements and, if applicable, reimbursement from Sydney Water.

A member of our Growth and Development team will support you through the planning, designing, building and testing processes.

Once a developer builds the infrastructure, they must transfer ownership to Sydney Water for operation and maintenance. An overview of our funding principles for accelerating infrastructure delivery is on page 10.

More information about developer funded infrastructure and conditions for reimbursement can be found in our [Funding infrastructure to service growth policy](#). See also the Quick links page at the end of the document to learn more about the land development requirements and processes at Sydney Water.

Lodge a feasibility application with Sydney Water via a Water Servicing Coordinator. This helps us understand your early development plans in greenfield and infill areas and allows us to incorporate this growth demand into our datasets and planning work.

Provide us with both anticipated *ultimate* and annual staging values, along with *indicative* timescales to assist the initial planning. This information assists in the initial planning assessment and enables us to explore both short and long-term servicing opportunities. Ask your account manager for a growth data form to discuss your staging and timeframes.

---

**For further discussions about accelerating servicing for your development, please contact Fiona Christiansen, Senior Manager Developer Relationships, at [developerservices@sydneywater.com.au](mailto:developerservices@sydneywater.com.au)**

# Our commercial arrangements

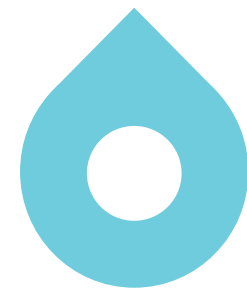

We establish a commercial agreement when infrastructure planning and construction is initiated by our customers.

This agreement clearly outlines the responsibilities for forward funding and constructing the infrastructure, as well as the ongoing ownership and maintenance. See a summary of the funding principles for each development scenario on the next page.

These commercial arrangements do not alter the requirement to pay infrastructure contributions for the development (see page 11).

|  <b>Planning status of proposed development</b>                                                                                      |  <b>Timing of proposed development</b>                                                                                                    |  <b>Funding arrangements</b>                                                                                                                                                                                                                                                          |

Accelerated greenfield development or other land release that is to be at 'no cost to the Government'.</b></p>            | <p>Anytime</p>                                                                                                                                                                                                             | <p>The developer funds and builds infrastructure, then transfers it to Sydney Water. We set up a reimbursement schedule, starting with payments as we release Section 73 compliance certificates for the development. Once half the dwellings have these certificates and all infrastructure is constructed, we pay the remaining costs of in a single payment.</p>      |
|  <p><b>3. Not on NSW Government's program or in an area where no planning has begun.</b></p>                                       | <p>Anytime</p>                                                                                                                                                                                                             | <p>The developer funds and builds infrastructure and then transfers it to Sydney Water. A commercial agreement is required for the transfer and operation of assets. It is likely there will be no repayment or reimbursement schedule for this infrastructure.</p>                                                                                                      |

**Note:** Infrastructure contributions apply. Please talk to us about recycled water schemes to confirm the funding arrangements.

# Infrastructure contributions

Infrastructure contributions help recover the costs of providing services to new connections and have been a part of our cost-recovery framework since the 1960s. In December 2008, the NSW Government set water and wastewater infrastructure contributions to zero for Sydney Water (and Hunter Water). Since then, the cost of servicing new connections has been recovered from all customers in their quarterly bills. In Sydney Water's case, this amounts to more than \$2 billion of new assets plus operating costs. The zero-charge policy has reduced the affordability of our services for all customers, adding as much as \$200 a year to customer bills. This policy would have had the potential to add a further \$200 or more a year over coming years as we invest to serve new developments.

The reintroduction of infrastructure contributions for drinking water and wastewater services from 1 July 2024 will help recover the cost of providing water infrastructure to new developments. This follows recommendations set out in the [NSW Productivity Commission's Infrastructure Contributions Review](#) and adopted by the NSW Government. The reintroduction

of infrastructure contributions provides a price signal for the various costs of providing services in different locations. Price signals enhance the potential for competition in the provision of water and wastewater services to new developments.

IPART regulates infrastructure contributions and sets the calculation methodology we must use involving the design of Development Servicing Plan (DSP) areas. DSP areas can be thought of as charging regions, each with its own price.

With the reintroduction of infrastructure contributions, we are committed to supporting developers through this transition and are introducing improvements to better meet developer expectations of our services, including:

- certainty of timeframes for developer applications
- certainty of timeframes for the delivery of growth servicing infrastructure.

The reintroduction of infrastructure contributions does not change our policy for reimbursing

certain developer-delivered works as outlined in our [Funding infrastructure to service growth](#) policy, and the infrastructure contribution payment and works' reimbursement are separate transactions. Commercial agreements involving forward funding or developer delivery for accelerated servicing with or without reimbursement are similarly separate transactions and the requirement to pay infrastructure contributions remains.

Drinking water and wastewater infrastructure contributions are being gradually reintroduced such that they have been capped at 25 percent in 2024-25 and 50 percent in 2025-26, with full contributions from 1 July 2026 onwards, in line with a transition plan approved by the NSW Government.

For more information, visit the [land development page](#).

# Infill and greenfield development

We know that people want to live close to where they work and socialise, increasing the demand for infill development in urban areas.

Sydney Water's Growth Servicing Plan outlines our response to government recognised growth areas, predominantly in greenfield areas with limited or no services.

As housing demand increases, we anticipate additional or accelerated growth across our servicing area, including in established urban areas. These areas may require significant review, amplification, and investment before being able to accommodate increased or accelerated growth.

If you are considering a development of 100 dwellings or more in established infill or greenfield areas, Sydney Water wants to hear from you.

Please lodge a feasibility application through a Water Servicing Coordinator or contact your account manager to ensure we can plan for your development.

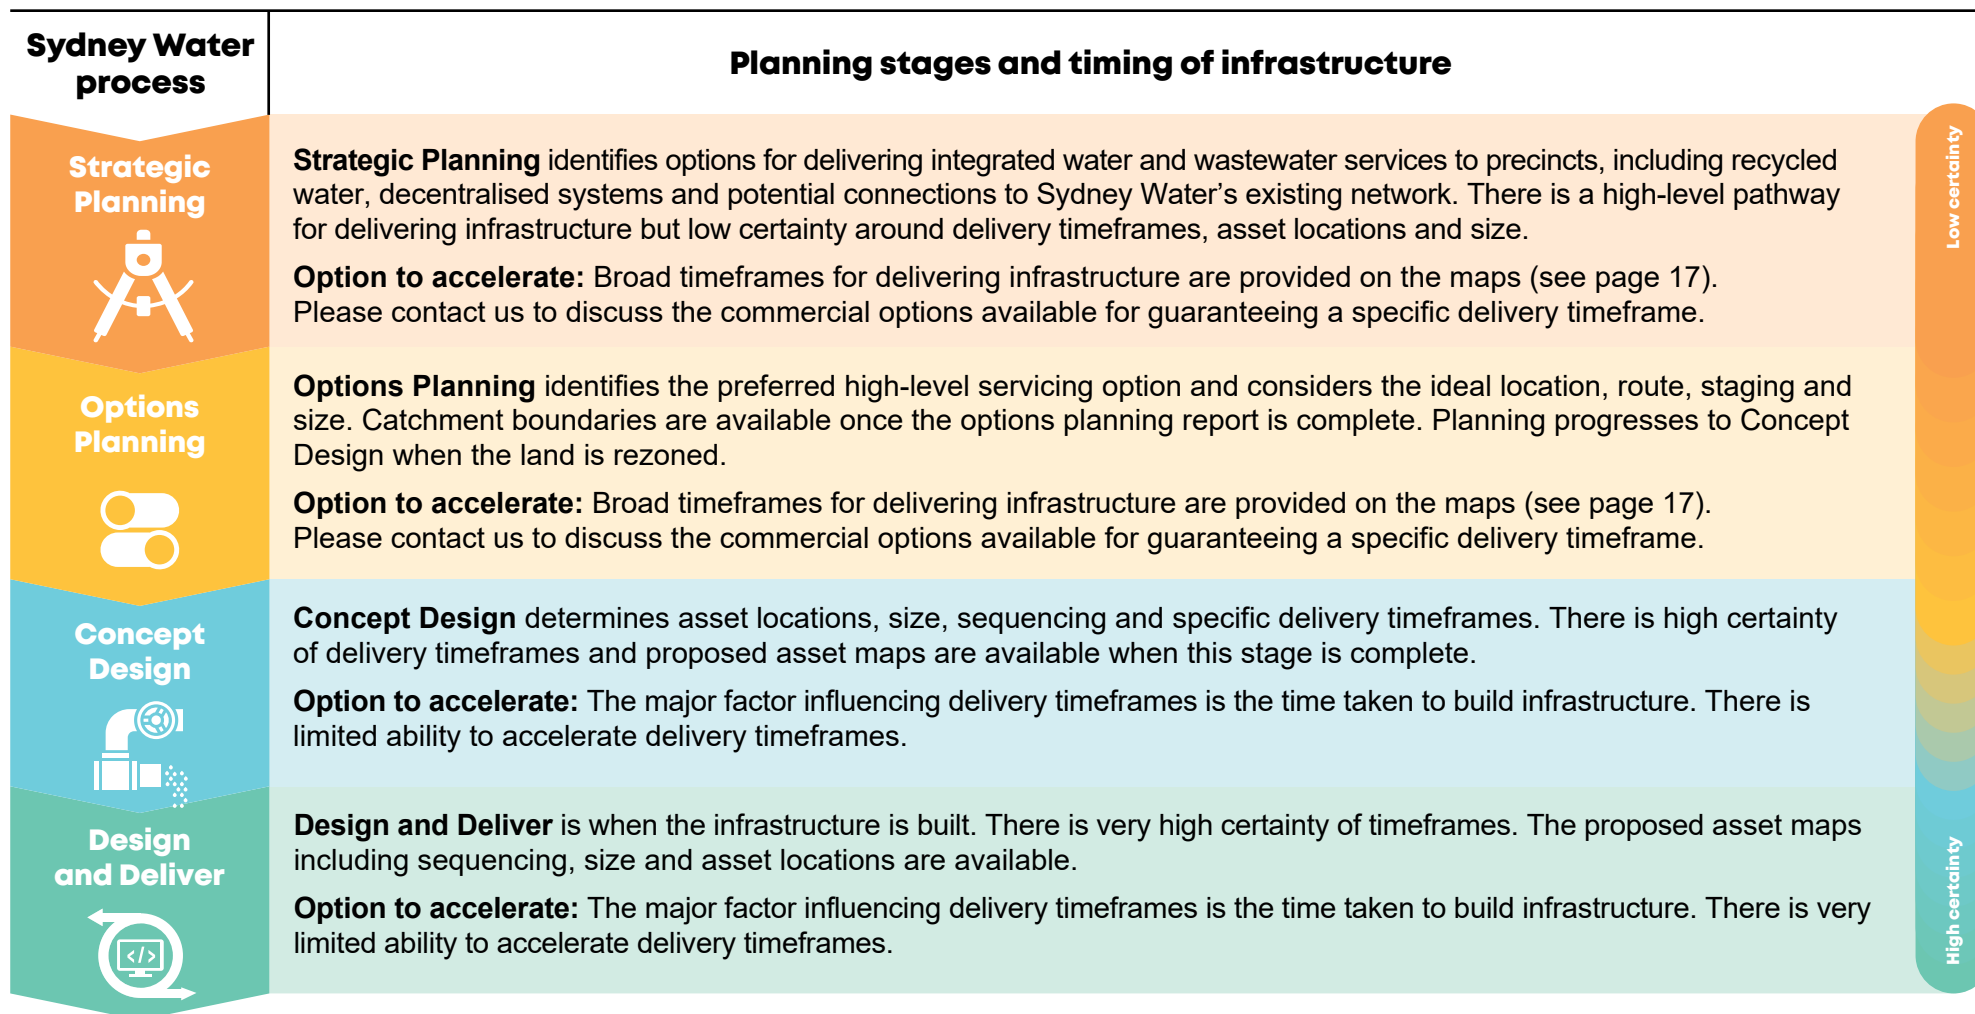

# Mapping our future directions

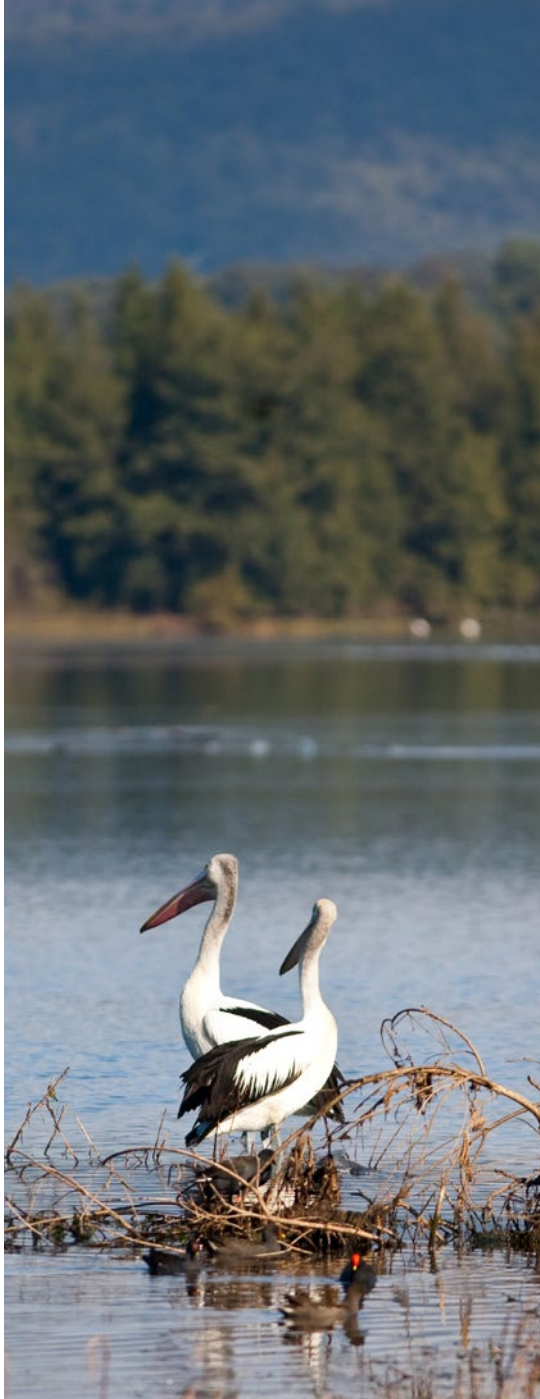

Our planning stages align to the timing and certainty of our infrastructure.

As we move closer to the design and delivery phases of our infrastructure projects, our ability to provide information about the type of infrastructure, timing of construction and delivery improves.

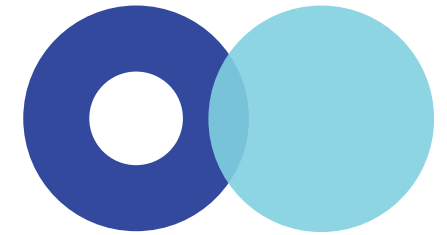

Our plans for delivering water-related infrastructure are presented on maps. The diagram on the next page explains our planning stages. It also provides direction on the options available for accelerating infrastructure delivery.

If delivery timeframes on the maps do not align with your development program or you need more information, please contact our Developer Partnerships team, at [developerservices@sydneywater.com.au](mailto:developerservices@sydneywater.com.au), to find out about the commercial options available.

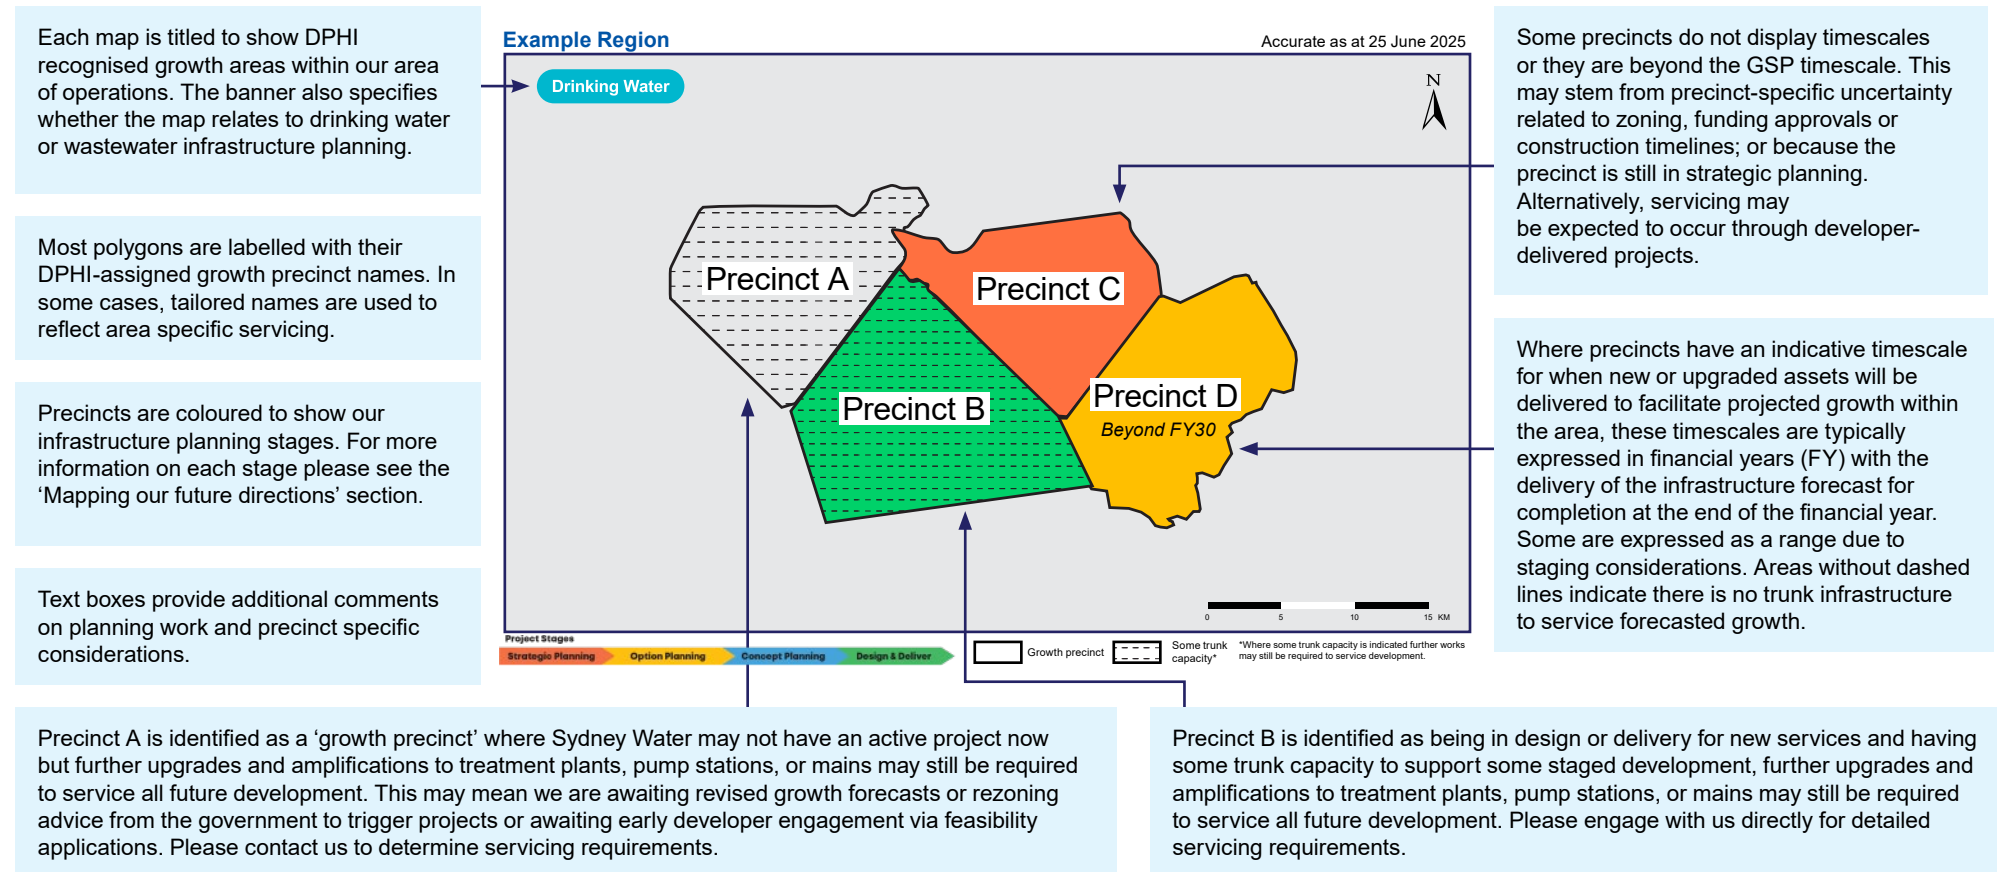

# Maps

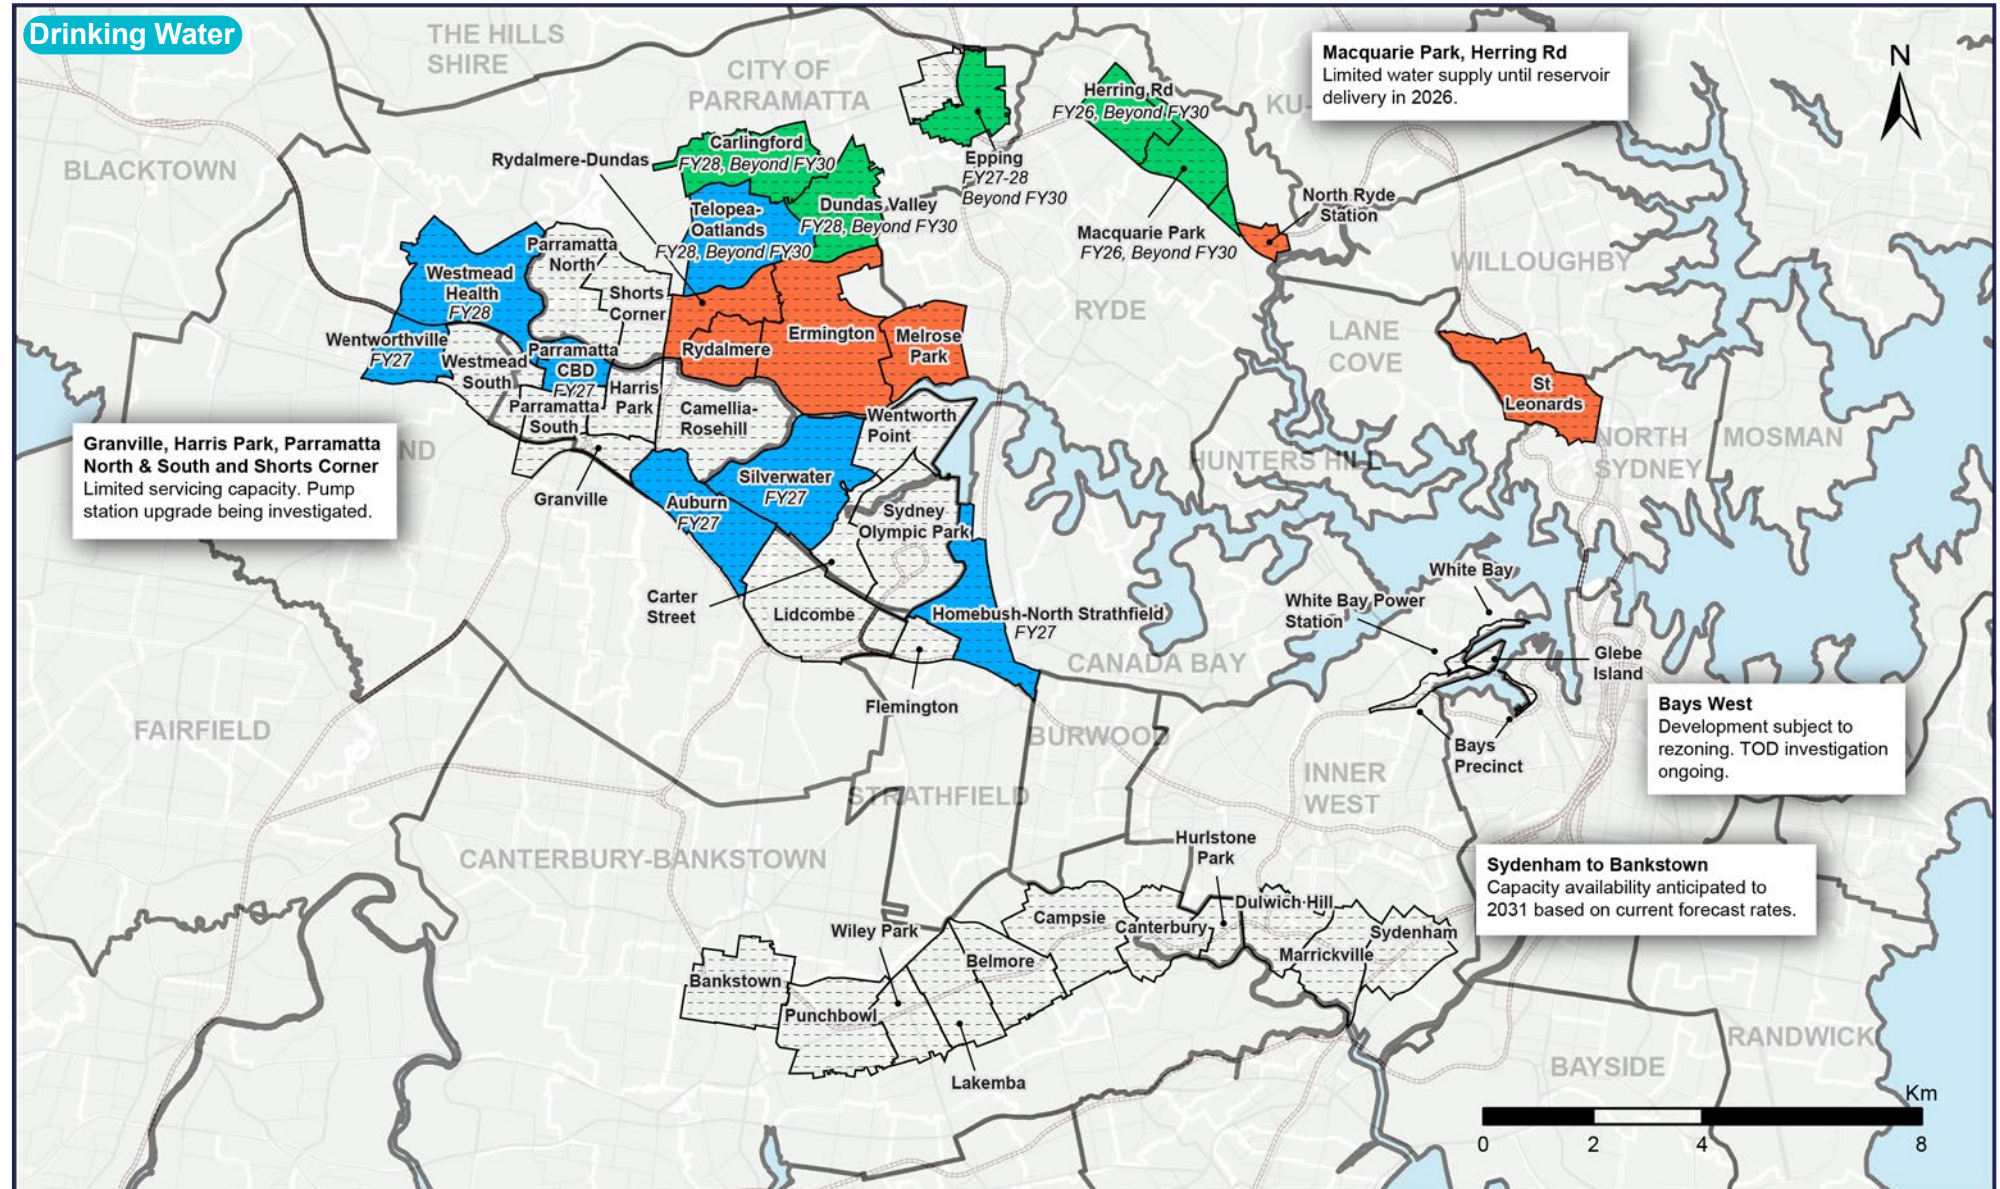

The maps on the following pages show the expected availability of water-related infrastructure across Greater Sydney and the Illawarra region over the next 5-15 years.

# How to read our maps

We've refreshed our maps to better highlight areas with some or limited servicing capacity. Precincts marked with dashed lines indicate that some trunk infrastructure capacity exists. This capacity may be limited either now or for the anticipated growth over the next five years. It's important to note that trunk infrastructure alone does not make a site service-ready. Additional work may still be required such as upgrades to treatment plants, pump stations or amplifications to existing mains. Precincts without dashed lines indicate that there is no current trunk servicing capacity available - either due to constraints in existing assets, no existing trunk infrastructure, or we are awaiting government rezoning data to fully assess. The servicing plans shown within GSP 2025-2030 are based on *Sydney Housing Supply Forecast 2023* as well as growth plans communicated to us directly.

Please contact us for the latest information before committing to any development work, as these maps will continue to change (see the full disclaimer on page 30). Early engagement is essential, as servicing often involves further infrastructure planning and lead times. In general, feasibility applications should be lodged when the development exceeds 100 dwellings or any development that is within an area with no trunk capacity or services.

# What's next

Sydney Water requests your support in making sure we have all the relevant information when planning for water-related services. We want to make sure we deliver the right services at the right time. To do this we consider the following:

- What services are required
- When new services are required
- If we utilise existing services in the short term, and for how long and what are the capacity limitations.

To enable us to assess this information, we request that you speak to us as soon as possible. The best way to do this is to lodge a feasibility application and talk to your case manager.

Remember to provide us with a staging plan and annual anticipated breakdown of your development numbers to assist us in looking at short and long term servicing options for your development.

For further information see our Quick links page or contact Developer Services at [developerservices@sydneywater.com.au](mailto:developerservices@sydneywater.com.au).

## Description

More information about Sydney Water and our area of operations

Projects in your area is your space to have your say and to stay updated on current Sydney Water projects and plans such as those in Western Sydney.

More information regarding our system capacity reporting. Detailed by network catchment for water and wastewater.

This section on our website gives advice for first time builders and large developments. It provides information on the processes required for land development, connecting to our assets and completing the Section 73 application process.

Links to our listed providers, instruction forms and standards and specifications.

Enquiries should be via your Water Servicing Coordinator or [developerservices@sydneywater.com.au](mailto:developerservices@sydneywater.com.au)

# Disclaimer

Where some trunk capacity is indicated, further upgrades and amplifications to infrastructure such as, but not limited to, treatment plants, pump stations, or mains may still be required to service future development. Developer lead-in and reticulation mains are required to connect new developments to trunk infrastructure.

While Sydney Water has made every attempt to provide timeframes and servicing information that is up to date, these can be affected by many factors and are provided as guidance only. Sydney Water makes no representation, warranty, undertaking or guarantee (express or implied) that the timeframes or servicing capacity in this Growth Servicing Plan (GSP) are accurate or reliable.

Any use or reliance on this information is taken at your own risk. To the extent permitted by law, in no event will Sydney Water be liable for any loss, cost, expense, claim, liability or damage arising from or in connection with the timeframes provided in this GSP.
